Data Cleaning, and Splitting Workflow

```
Food_Inspections_OpenRefine.csv
            │
            ▼
remove redundant location column
            │
            ▼
clean up address variations and incorrect/missing city/zip/state
            │
            ▼
clean up conflicting risk information
            │
            ▼
clean up violation result conflictions
            │
            ▼
clean up duplicated inspections
            │
            ▼
generate address and facilities table, and save intermediate half-cleaned data
            │                    ├──→ input_data_cleaned_intermiediate.csv ──→ ○
            │                    ├──→ facilities.csv ──→ ○
            │                    └──→ addresses.csv ──→ ○
            ▼
generate risk and facility_risk table
            │                    ├──→ risk.csv ──→ ○
            │                    └──→ facility_risk.csv ──→ ○
            ▼
collapse repeated inspections
            │
            ▼
generate inspection and facility_inspection table
            │                    ├──→ inspections.csv ──→ ○
            │                    └──→ facility_inspection.csv ──→ ○
            ▼
split violation into individual code for each inspection
            │
            ▼
split violation code, description, and comment
            │
            ▼
generate violation and inspection_violation table
                                 ├──→ violation.csv ──→ ○
                                 └──→ inspection_voilation.csv ──→ ○
```
